Todsapon Boontap

Software Engineer

Passioned in quality of code, more focus on programming paradigms & software design
Software is software ... make it soft.

Not much talking with new people, unnecessary funny with close one.

Coding, Sport, Music are needed.

Experience

2021 - 2022

Be a part of Paotang project as iOS engineer, contributed wallet relevant features. After 3 months pass, I was chosen by a manager to build Golang team, regarding of an upcoming project which's Digital Lending, so I was the first one.

I had opportunity to start the project from beginning. Other developers join later so guiding, code structuring, team building also was a part of my role.

2020

Joined as a fullstack developers for start up company. Project was kind of Grab, Food panda. They were developing a core monolith service with nodejs as a backend, but their outsource consultant convinced to change to kotlin springboot.

So I had to learn kotlin language and rewrite the legacy codebase as kotlin springboot; despite there's a communication issue whether it's WFH company, a team member had different working time.

CEO requested me to solve. I helped work-flow setting, organized daily standup meeting and set communication time period. Issues were gradually start to improve.

2018

Exciting project K-Plus in that time called Victoria, I joined as an iOS engineer. Slip page, home menu with user bank accounts and bit of setting feature are all my hand.
